Profile

Software Developer with 4 years of experience developing and supporting enterprise and government applications using Java, Spring Boot, Golang, and Angular. End-to-end experience in government revenue systems, ERP platforms, BPMN solutions, and real-time GIS/geolocation applications, including Linux deployment, SQL Server/PostgreSQL database management, and direct client gathering requirements.

Technical Skills

Backend: Spring Boot (Java 8 & 21), Gin (Golang), FastAPI (Python)
Frontend: Angular, TypeScript, JavaScript, Ionic, HTML, CSS, PyQt (Python)
Databases: PostgreSQL, SQL Server, MySQL
DevOps: Linux, Git (GitLab, Bitbucket), Jira, Postman, Docker, Cloudflare
Integrations: REST APIs, JWT, OAuth2, JasperReports, QGIS

Work Experience

- CIANET** May 2022 – Present
Software Engineer Durango, Mexico
- Full-stack development (Java/Spring Boot, Go, Angular) of enterprise and government applications, participating in the entire lifecycle: REST API design, database architecture, frontend creation, and production support.
 - Direct collaboration with clients and end-users for requirement gathering, issue analysis, and delivery of custom software solutions. Detailed specific projects can be found in the Projects section.
 - Managed Ubuntu servers, handling deployments, log tracking, repository updates, and database administration.
- Jadosh** June 2026 – Present
Freelance Web Developer Remote
- Developed responsive landing pages and corporate websites using React for small businesses, managing the entire pipeline from requirement analysis to final deployment.
- UNIPOLI Durango** May 2021 – August 2021
Python GIS Intern Durango, Mexico
- Automated cartographic report generation and spatial analysis in QGIS using Python scripts, including batch processing of geographical layers.

Projects (Cianet)

- Municipal Revenue & Cashier System** | Spring Boot, Angular, SQL Server, JasperReports
- Participated in the full-stack development of a municipal revenue system for the Cuautitlán city council to process over 200 different procedures, contributing to UI views, calculations, and data analysis.
 - Integrated the Global Payments gateway, enabling online electronic payments and streamlining financial reconciliation for the treasury department.
 - Designed financial reports with JasperReports used by the treasury team and resolved user-reported issues via an in-house ticketing platform.
- Tramitta – Procedure Management System** | BPMN, Spring Boot, Angular
- Designed and implemented BPMN workflows to digitize online procedures across various government dependencies.
 - Adapted a QR-code-based document system allowing municipal inspectors to validate the authenticity of issued certificates on-site.
 - Led the integration of the project's banking payment gateway.
- Emergency Response System** | Go, PostgreSQL, WebSockets, Ionic
- Developed the backend in Go and PostgreSQL for a real-time system used by security personnel, implementing WebSockets communication for instant alerts and unit tracking.
 - Developed the companion mobile application utilizing Ionic Angular.
- Metallurgical ERP** | Angular, Go, SQL Server
- Developed a full-stack ERP for a large-scale metallurgical assembly plant, digitizing workflows previously managed in disjointed Excel sheets that frequently caused data loss.

- Implemented product and raw material catalogs with automatic delivery/reception notifications between departments to ensure full traceability of material flows.
- Built an alert and data analysis system featuring operational KPIs, gathering requirements directly from end-users and operational personnel.

AML – Anti-Money Laundering System | *Spring Boot, Python, FastAPI, Tesseract, LLM*

- Developed the initial backend in Spring Boot featuring OAuth2 and JWT authentication.
- Built an OCR microservice (Python, FastAPI, Tesseract) to extract data from user-uploaded files (e.g., bank statements) and validate sensitive data, such as RFC, against manually entered information.
- Integrated an LLM model to interpret raw text returned by the OCR and structure it into JSON, simplifying automated validation workflows.

Cartographic Management System | *Python, QtDesigner, Spring Boot, PostgreSQL*

- Designed and tailored software modules to fit the specific administrative needs of multiple municipal governments.
- Integrated a QGIS plugin in PyQt connected to a Spring Boot microservices backend for SHAPE layer editing, data ETL, automatic report filling, and user permission management.

Education

Universidad Politécnica de Durango	Durango, Mexico
<i>B.S. in Environmental Technology Engineering – Graduated</i>	2018 – 2021
CBTis #110	Durango, Mexico
<i>Technical High School Diploma in Computer Equipment Support</i>	2015 – 2018
